

Date: **2 July 2025**  
Product: **Hughes 9450 Classic and 9450E**  
Release: **5.7.4.1**  
Importance: **Recommended**

Software version 5.7.4.1 is a recommended upgrade for the Hughes 9450 Classic and 9450E terminals.

The 5.7.4.1 upgrader is available through both the Inmarsat support page:  
[BGAN firmware \(inmarsat.com\)](https://inmarsat.com)  
and the Hughes BGAN support page:  
[bgan.hughes.com](https://bgan.hughes.com)

### **Release Notes for 5.7.4.1 (Since 5.7.4.0)**

#### **Enhancements**

- Disable the vxWorks WDB debug agent on port 17185 to address security concerns.
- Update the default satellite constellation information to include IOE and remove MEAS.
- Correct the date when the GPS week rolls over. The date in the GPS system rolls over every 1024 weeks, which causes the GPS chip to report the wrong date when it is 19.7 years old, preventing the UT from registering on the BGAN system.
- Fix download of log files from the Web UI Support page.
